

# SAURABH GHODEKAR

.NET Core Full Stack Developer | Pune, Maharashtra

saurabh.ghodekar15@gmail.com | 7758097067 | [www.linkedin.com/in/saurabh-ghodekar](https://www.linkedin.com/in/saurabh-ghodekar)

---

## PROFESSIONAL SUMMARY

Results-driven **.NET Core Full Stack Developer** with **3.7+ years of experience** in designing, developing, and deploying **enterprise-grade web and desktop applications** using **.NET Core, ASP.NET MVC, Web API, C#, and SQL Server**.

Proficient in **RESTful API design, Entity Framework Core, Angular**, and **database optimization** with secure authentication (**JWT, Access & Refresh Tokens**). Skilled in building **interactive dashboards** with charts, tables, PDF/Excel exports, and deploying .NET Core apps on **Linux (Ubuntu)** via **Nginx + Kestrel**.

Experienced working in Agile-style environments with sprint-based planning and task tracking.

Dedicated to delivering **scalable, maintainable, and high-performance** software solutions that enhance user experience.

---

## TECHNICAL SKILLS

**Languages & Frameworks:** C#, .NET Core 9, ASP.NET MVC, Web API, Entity Framework Core, ADO.NET, LINQ

**Frontend Technologies:** Angular / AngularJS, JavaScript (ES6+), TypeScript, HTML5, CSS3, Bootstrap, AJAX, jQuery

**Database Management:** SQL Server, PostgreSQL, SQLite, MSSQL, Stored Procedures, Query Optimization

**Tools & Platforms:** Visual Studio, Git, SVN, Postman, RDLC, Windows Services, Console Applications, Jira

**Deployment & Environments:** Nginx, Kestrel, Ubuntu (Linux), IIS, Git-based versioning, basic CI/CD familiarity.

**Concepts & Practices:** RESTful API Development, Token-Based Authentication (JWT / Refresh Token), Async/Await, Microservices (exposure), Exception Handling, Performance Tuning, Agile Scrum Methodology

---

## PROFESSIONAL EXPERIENCE

**Assistant Manager - Software Development**

**Arya Omnitalk Wireless Solutions, Pune | June 2022 – Present**

**Project: Multi-Level Free Flow (MLFF) Tolling System**

**Tech Stack:** .NET Core MVC, Web API, PostgreSQL, HTML, CSS, JavaScript, Bootstrap, jQuery, Async/Await, AJAX

- Developed and maintained **Enforcement** and **MIS** modules, handling both **frontend (UI)** and **backend (API)**.
  - Created comprehensive **dashboards** showing data via **tables, graphs, pie charts, Excel/PDF exports**.
  - Built secure **RESTful APIs** with **JWT-based authentication (Access & Refresh Tokens)**.
  - Designed and implemented **Windows Services** to automatically fetch and process **ANPR images**.
  - Authored and optimized multiple **.NET Core Web APIs** enabling real-time communication between RFID and ANPR systems.
  - Improved API response time by ~30% through async operations and query optimization.
  - Followed **Agile-inspired sprints** using internal task tracking for planning, issue resolution, and delivery reviews.
- 

**Project: AVC Migration**

**Tech Stack:** .NET Framework 3.5 → .NET Core 9, Web API, PostgreSQL, Linux (Ubuntu), Nginx, Kestrel

- **Migrated legacy .NET Framework 3.5** modules to **.NET 9**, improving cross-platform performance.
  - Refactored and modularized legacy logic into **clean API-driven architecture** with structured error handling.
  - Set up **Linux-based hosting** using **Kestrel + Nginx**, ensuring stable uptime and simplified deployment.
  - Enhanced maintainability and API performance by introducing async calls and improved logging.
-

### Project: Cash Deposit System

**Tech Stack:** ASP.NET MVC, SQL Server, AngularJS, jQuery, RDLC

- Developed **AngularJS front-end components** integrated with optimized ASP.NET MVC APIs.
  - Improved cash flow monitoring speed by ~25% via stored procedure and API optimizations.
  - Delivered cleaner UI for real-time transaction visibility across toll plazas.
- 

### Project: Highway Toll Management System

**Tech Stack:** .NET MVC, WinForms, SQL Server, RDLC, Stored Procedures

- Customized **RDLC reports** and Windows Forms to address client requirements.
  - Automated report generation and data validation, cutting manual effort by 40%.
- 

### Project: RFID Data Processing

**Tech Stack:** C#, SQLite, Web API, Console Application

- Built a **C# console application** for asynchronous RFID transaction handling.
  - Ensured reliable offline-to-online data sync via queued background processing.
- 

## EDUCATION

**CDAC - Post Graduate Diploma in Advanced Computing (PG-DAC) | 2022**

**B.E. Computer Science**, Indira College of Engineering, Pune | 2019

---

## ADDITIONAL DETAILS

- Worked in an Agile-style environment with sprint-based planning, task tracking, and iterative delivery using internal tools.
- Hands-on with Git-based version control, branching, code reviews, and structured deployment workflows.
- Solid understanding of SDLC, RESTful API design, performance tuning, and multi-environment deployment.
- Strong interest in Full Stack Development, Modernization, and API Engineering using .NET Core and Angular.
